#### **DETAILED ACTION**

### Claim Objections

Claims 37-42 are objected to because of the following informalities: Change the word "machine" to "computer", furthermore, it is suggested that claims 37 and 40 be rewritten possibly as follows;

"A computer readable medium having executable instructions to perform operations including:". Appropriate correction is required.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-45 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al (US 2005/0208959 A1)

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in

Application/Control Number: 10/725,904

Art Unit: 2616

the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1, 2, 9, 20, 25, 30, 34, 37, 40 and 43, Chen discloses a method for processing information in a communication system (Fig. 6), comprising:

partitioning a control channel used for transmitting control information into a plurality of subchannels (Fig. 5, paras 93, 94, a power control channel is partitioned into subchannels into power control even or odd groups), each subchannel being operated at a specific data rate (Fig. 5, subchannel 1 operates at 400bps, subchannel operates at 400bps specific to each subchannel in this case); selecting, for each of one or more user terminals, one of the subchannels to be used for transmitting control information from an access point to the respective user terminal, based on one or more selection criteria (paras 93, 94, the FCPCCH is used with user specific signaling to adjust the transmit power for each wireless device via the FL-PC bits received from the wireless terminal); and transmitting control information from the access point to a particular user terminal on a particualr subchannel selected for the respective user terminal (again paras 98, 105, FCPCCH is used to transmit power control information to each individual user on a particual subchannel for a given terminal).

Regarding claims 3, 4, 21, 31, and 38, Chen discloses each subchannel is associated with a specific set of operating parameters (para 46, 66).

Regarding claims 5, 22 and 32, Chen discloses plurality of subchannels are transmitted sequentially in an order from a subchannel with a lowest data rate to a subchannel with a highest data rate (Fig. 5B).

Regarding claims 6, 7 and 23, Chen discloses a subchannel that is transmitted first in the plurality of subchannels includes a field to indicate whether other subchannels are also being transmitted (para 65, a mode is defined to indicate specific subchannel usage).

Regarding claims 8, 19, 24, 27, 29, 33, and 39, Chen discloses the one or more selection criteria are selected from the group consisting of a first criterion corresponding to a link quality associated with the respective user terminal, a second criterion corresponding to quality of service requirements associated with the respective terminal, and a third criterion corresponding to a subchannel preference indicated by the respective terminal (para 46, 66).

Regarding claims 10, 11 and 26, Chen discloses performing a decoding procedure to decode the one or more subchannels, starting with a subchannel operated at a lowest data rate, until at least one of a plurality of conditions is met (para 67, decodes data at received data rate).

Regarding claims 12, 13, 35, 41 and 44, Chen discloses wherein the plurality of conditions includes a first condition indicating a failure to correctly decode one of the plurality of subchannels (para 67, upon decoding the receiver determines if decoded correctly or in error).

Regarding claims 14, and 15, Chen discloses the plurality of conditions includes a third condition indicating that all subchannels have been processed (para 102 reverse ack channel provides that the received info via given channel is processed correctly).

Regarding claim 16, While Chen explicitly does not disclose a cyclic redundancy check (CRC) check, however, one skilled in the art will appreciate that CRC is inherent within a wireless system for improving quality of voice/data transmission within a link, thus Chen inherently incorporates CRC within its system.

Regarding claim 17, 28, 36, 42 and 45Chen discloses determining whether control information designated for the user terminal is present in the respective subchannel, based on an identifier associated with the user terminal (para 77, the FDCCH has information relevant for each specific wireless subscriber).

Regarding claim 18, Chen discloses plurality of user devices 120 (Fig. 1) where each device inherently has a Medium Access Control (MAC) identifier assigned by the manufacturer of the device to uniquely identify each device.

# Response to Arguments

Applicant's arguments with respect to claims 1-45 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raj K. Jain whose telephone number is 571-272-3145. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on 571-272-3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
